DETAILED ACTION

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 11/26/07 has been entered.

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

3. Claims 8,10,16, and 17 are rejected under 35 U.S.C. 102(b) as being anticipated by Buzzell et al (USPN 6187247). Buzzell et al teach the claimed process as evidenced at col 8, ln 28-col 9, ln 17; and figs 13a-13c. It should be noted that fig13c teaches the claimed angle.

4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

5. Claims 13-15 are rejected under 35 U.S.C. 103(a) as being unpatentable over Buzzell et al (USPN 6187247). The above teachings of Buzzell et al are incorporated

hereinafter. In regard to claims 13-15, such final product limitations are mere matter of choice dependent on the desired final product and of little patentable consequence to the claimed process since it is not a manipulative feature or step of the claimed process. Further, the claimed product limitations are well-known in the molding art. Thus, it would have been obvious to one of ordinary skill in the art at the time the invention was made to mold a product having the claimed product limitations by the process of Buzzell et al in order to meet consumer demands.
